STOP!!! DIRTY WATER!

CONCEPT: DRAINING WATER FROM A DANGEROUS SOURCE? Snap-on a *DO NOT DRINK* (“DND”) COLLAR and *KEEP KIDS SAFE!*

In general, drinking from garden hoses is NOT a good idea!* According to UNICEF, about **5,000 children PER DAY** get sick or die around the world from water-borne diseases! The simple but effective *DND* snap-on collar system could change all that in an instant!

DON'T DRINK THAT WATER!

UTILITY: *The flexible, one size fits all DO NOT DRINK collars can be packaged and sold in pairs for fast and easy installation on both sides of any garden hose, sink faucets at Lake Houses, or any other hose or pipe from which one should not drink the water. DND displays one clear message; DO NOT DRINK from here.*

WHY use DND collars? Look to the left! Kids can be easily tempted to drink from generic garden hoses, especially when playing outside and thirsty, but, kids will likely NEVER check where the seemingly “clean” water is actually flowing through the hose from! Imagine if this child drank the hose water, he believed to be clean?! With the installation of simple DND collars the probability of the child drinking from this hose diminishes greatly.

Help to save children from disease and/or death today. Collaborate with us to create and bring to market the DND Collars.
